

EMERGENCY HEATER IN A CAN

Uses	Home In your car during winter months Camping For your 72 hour kit
Supplies	1 empty quart can (you can purchase at any paint store) 1 bottle of rubbing alcohol 1 roll of toilet paper (with cardboard removed) paint can opener (you can purchase at any paint store or mini philips screwdriver) pack of matches or lighter
Assembly	<ol style="list-style-type: none">1. Remove core of toilet paper2. Fold the roll of toilet paper in half and stuff into the empty quart can.3. Slowly pour 1 pint alcohol into can.4. Light w/ lighter or match.5. To extinguish, replace the lid.6. Put the following instructions in with the rest of the items.
Instructions for Use	Use 70% isopropyl alcohol-any higher percent the flames could be too high. Do not use scented alcohol, it will smell awful in your car. 4 pints of isopropyl will keep a car 60 to 70 degrees for 24 hours. They are extremely safe and don't produce carbon monoxide.

To make as a gift: Remove core of toilet paper. Fold the roll of toilet paper in half and stuff into the empty quart can. Put the can and the rest of the items in a ziploc bag separately so the recipient may pour the alcohol in the can when heat is needed. Include instructions with the kit.

Warnings: The can rim will be hot to touch during and for a while after burning, although the can could be held from the bottom even while the heater is burning. It is suggested that you carry a metal pan or cookie sheet or fold a square of tin foil into fourths to set the heater on. Do not pour more alcohol on the heater while burning. Wait for it to burn out or smother with metal lid.

****It is recommended that you keep a window cracked open while burning the heater.****

This heater is NOT recommended for cooking!
