

Disinfectants Approved for Use in Child Care Facilities

Disinfectants are to be used on surfaces that are commonly contaminated with high hazard body fluids¹, surfaces such as, but not limited to, toilet seat inserts, diaper changing areas and any other surface that may have been contaminated with these fluids. This list is intended as a resource for child care providers inquiring about disinfecting solutions with a low contact time that is reasonable to use when changing diapers. Regular bleach when mixed according to the labeled instructions is approved for use.

Products mentioned does not represent endorsement by the Colorado Department of Public Health and Environment. A product does not have to be listed to be approved for use provided it meets the requirements in Section 7.10.6 of 6 CCR 1010-7, *Health and Sanitation of Child Care Facilities in the State of Colorado* (regulations). Disinfectants listed have been verified that they meet the approval criteria in the regulations, have a contact time of 3 minutes or less, and do not require a rinse step. Information provided does not supersede the manufacturer’s labeled instructions.

The listed products are not approved to be used as a **sanitizer** on desks, dining tables, food contact surfaces, or toys unless they have instructions for use on food contact surfaces.

Disinfecting Product Name	EPA Registration No.	CO Registration No.	Ready to Use	Contact Time for Routine Disinfecting
All Purpose Virex Disinfectant Cleaner	1839-83-70627	103764	Yes	3 minutes ²
